

60 minutes for 20 questions

Be aware that **the last questions take longer than the first ones**, so do not spend too much time on the early questions.

3 questions require you to write short pieces of code.

Please assume that **you cannot go back to a previous question** once it has been validated.

No points are deducted for incorrect answers in Multiple Choice Questions (single answer). For Multiple Answers Questions, selecting incorrect options leads to a penalty within the question's score (the final score for a question cannot go below 0, but selecting all options will not necessarily yield the maximum score).

Python interpreter: The one you have been using during the training.

Course materials: Everything available at https://github.com/BEESPE/2026-05_HoT-Python-BA

Official documentation:

- Python: <https://docs.python.org/3/>
- pandas: <https://pandas.pydata.org/docs/>
- NumPy: <https://numpy.org/doc/>
- matplotlib: <https://matplotlib.org/stable/index.html>

LLM AI tools: You may use ChatGPT (<https://chatgpt.com/>) for coding-related questions during the exam. However, it should only be used for specific requests within a question (e.g., generating part of the code), not to obtain complete answers. For general knowledge questions, online searches or AI tools are not allowed.
